Software Engineer | UI/UX Designer | Project Manager

Software development (Full Stack Web & Mobile) | Front-End Development (HTML, CSS, Tailwind CSS , Javascript, React) | Back-End Programming (Nodejs, Flask) | Python Programming (Python, Pandas, Numpy) | API Design & Integration (REST APIs) | SQL & Relational Databases(SQL , PostgreSQL) | Project & Workflow Management (Notion, Jira, Agile, Scrum) | Cloud Infrastructure, DevOps & Deployment (Fly.io,Docker, Google Cloud Console, Cloudflare, AWS) | Technical Documentation (API Documentation, User Manuals) | Software Testing(Unit Testing, Performance Testing) | Microsoft (MS Excel, MS Powerpoint, MS Word)

PROFESSIONAL SUMMARY

Purpose-driven Software Engineer and Technical Project Manager with expertise in building robust, data-driven web applications from scratch. I combine full-stack engineering (React, Python, PostgreSQL) with intuitive UI/UX design, and translate complex organizational needs into high-performing digital assets. Experienced in managing full project lifecycles, optimizing relational databases and aligning tech infrastructure to support live, large-scale events and community-driven initiatives.

Core Competencies

- Cross-Functional Team Collaboration: Proven ability to work seamlessly alongside external enterprise developers, creative designers, and on-the-ground operations teams to deliver unified project goals.
- Technical Communication: Skilled at translating complex technical architecture into clear, actionable business strategies for management and external partners.
- Data-Driven Problem Solving: Strong analytical approach to diagnosing platform bottlenecks and resolving systems logic issues.
- Project Adaptability : Excel at managing changing priorities under tight deadlines and stepping into multi-disciplinary roles when needed.
- Customer Experience & Outreach: Skilled in managing direct client communications to strengthen user relationships.

WORK EXPERIENCE

Software Developer & Technical Project Manager | Momentum Sports Africa

January 2026 - Present

Ecosystem Architecture & Delivery: Architected sports-fintech platforms and micro-websites to bridge the gap between technical development and high-level business strategy.

Liaison Group Collaboration: Co-launched an end-to-end sports-fintech and athlete management platform (tawc.co.ke) in partnership with Liaison Group, provisioning medical insurance, equipment coverage and retirement pension tracking for Kenyan athletes.

High-Stakes Stakeholder Meetings: Represented the technical team in high-stakes meetings with Liaison Group to successfully plan, secure and clear critical system integrations for commercial rollout.

Customer Relations & Growth: Partnered with marketing and sales teams to design social media content and conduct direct customer calls, improving client relations and driving signups for elite athlete camps.

On-Site Event Operations: Participated in on-ground operations for athletic tournaments by managing participant check-ins and on-site system troubleshooting.

Project Management Associate Intern | [Excelerate](#)

December 2025 - January 2026

Agile Project Delivery: Collaborated with a cross-functional, global team to plan and execute a 4-week structured project sprint targeted at resolving critical AI-driven operational inefficiencies and workflow bottlenecks.

Workflow Optimization & Metrics: Conducted deep-dive workflow audits to design an automation proposal (OCR/NLP tracking) that eliminated manual marketing data bottlenecks, driving a projected 70% increase in team efficiency and reclaiming 10+ hours weekly per team member.

Sprint & Backlog Management: Utilized Jira to architect project timelines, build comprehensive roadmap sprints and assign task ownership through visual dashboards and reporting.

Change Management & Risk Mitigation: Formulated professional-grade Risk Assessment frameworks and Change Management strategies to mitigate human resistance to automation, ensuring 100% stakeholder buy-in and clear team alignment.

Volunteer Junior Developer | [African Center for Women in Information and Communication Technology](#)

November 2023 - December 2023

Collaborative Ideation: Partnered within a developer cohort to conceptualize and brainstorm scalable tech solutions tailored to optimize student workflows at the University of Nairobi.

UI/UX Prototyping: Designed high-fidelity Figma wireframes and interactive prototypes to visually map out user journeys and secure stakeholder alignment.

Frontend Development: Built the responsive frontend layer using HTML, CSS and JavaScript to deliver a functional Minimum Viable Product (MVP) for executive presentation.

TECHNICAL PROJECTS

[The Athletes Wellness Club\(tawc.co.ke\)](#) - Lead Full-Stack Developer & UI/UX Designer

Designed and engineered an end-to-end sports-fintech and athlete management platform co-launched by Momentum Sports Africa and Liaison Group to provide holistic medical insurance, equipment coverage and retirement pension tracking for Kenyan athletes.

- Conceptualized and built high-fidelity web interfaces using React and Tailwind CSS, optimizing the end-to-end onboarding workflow
- Built Express REST proxy for Liaison API with Bearer authentication, request timeouts and defensive parsing of inconsistent third-party response formats
- Implemented server-side Safaricom M-Pesa number validation and structured error codes for payment related failures.
- Engineered and styled custom multi-step data collection workflows, programmatically capturing athlete package selection, and later routing them directly and securely to the partner's payment gateway via API calls.

Tech Stack: React, Node.js/Python, Figma, REST APIs, Bitbucket, Flyio, MPESA STKs

[The Great Muranga Community Run\(\[greatmurangacommunityrun.co.ke\]\(#\) \)](#) - Lead Full-Stack Developer & UI/UX Designer

Built and deployed a production web platform for community running event supporting 1200+ athlete registrations across eight race categories. Delivered a multi-step public registration flow, a race-day admin dashboard and automated bib and shirt-label allocation with printable and Word export for event operations.

- Built event website with a 4 step registration for athletes across 8 race categories-(Main Race, Corporate Run, Family Run , Kids, Seniors, Men Under 20 & Women Under 20).
- Integrated Supabase (PostgreSQL) as the backend for registration storage including schema design , SQL migrations and Row Level Security.
- Delivered a password-protected admin dashboard for race-day operations with live registration search and filtering , attendance check-in, automated bib allocation by age and printable PDF and Word (.docx) export.
- Containerised the app with Docker and deployed it to [Fly.io](#) (Johannesburg region) with environment-based configuration.

Tech Stack: Nextjs, React ,TypeScript, Supabase, Docker , Flyio, TailwindCss

Momentum Sports Africa Main Website ([msa.co.ke](#)) - Full-Stack Developer & UI/UX Designer

Integrated new features into Momentum Sports Main Website for example by adding an Events Tab that required a backend, I created a Nodejs + Express app that serves the site in production.

- Engineered the backend architecture for the core MSA platform and the sub-domain events application ([events.msa.co.ke](#)) by utilizing a modern JavaScript/TypeScript stack (React/Node.js) , a robust API design and PostgreSQL database.
- In events subdomain([events.msa.co.ke](#)), I developed scalable registration workflows and data persistence layers to handle real-time attendee data, transaction monitoring and secure information routing.
- Automated deployment pipelines using cloud-native infrastructure (Fly.io/AWS/Cloudflare), optimizing bundle sizes, asset delivery, and database query performance to support massive spikes during major athletic campaigns and tournament registrations.
- Added SEO metadata, Google analytics and health checks for production monitoring
- Constantly update the website with new features as requested for example Updates on Recent Events done by Little Giants Golf Program.

Tech Stack: React, Expressjs, Nodejs, Imagekit, Flyio, Cloudflare, Google Search Console, Supabase, Docker

Go-Eats UI/UX Design Project - [Live Demo](#)

A food app that allows users to keep track of restaurant promotions and choose restaurants based off aesthetics/mood.

- Conducted user research and created detailed wireframes and user flow diagrams
- Designed an intuitive navigation structure with clear content hierarchy and seamless user flows from onboarding to restaurant discovery.
- Established comprehensive design system with typography hierarchy and cohesive color palette
- Integrated location-based recommendations, mood-based discovery, social features such as ratings and reviews

EDUCATION

Moringa School

DevOps Engineering (Professional AWS Cloud Certification Inclusive)

Nairobi, Kenya

June 2026 - August 2026

Saint Louis University

Project Management Certification

Missouri, USA

Dec 2025 - Jan 2026

Moringa School

Software Engineering Certification

Nairobi, Kenya

Jun 2025 - Nov 2025

University of Nairobi

Bachelor of Arts in Design

Nairobi, Kenya

Sep 2019 - Nov 2023
